DETAILED ACTION

1. Applicant's election without traverse of Invention I. in Paper No. 8 is acknowledged.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 18 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 18 recites the limitation "said physical characteristics" in line 1. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting

Art Unit: 3627

directly or indirectly from an international application filed before November 29, 2000.

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 1-7, 14, 19 and 20 are rejected under 35 U.S.C. 102(e) as being anticipated by McCall et al. (US Patent 6,152,591).

McCall et al. discloses the claimed system. McCall et al. discloses a system controller (such as controller which controls pump, point of sale/transaction controller, credit card reader – uniquely identifies customer, multimedia controller and all other controllers disclosed); fuel dispensers (such as 10) in data transfer communication with said system controller, configured to dispense fuel to a vehicle; and a transaction accounting delivery station (station located in store, receipt is printed in the store when user selects “inside payment” at the pump, user uses indicia to notify clerk to reference their pump purchase) in data transfer communication with the fuel dispenser, configured to optionally deliver a transaction accounting (receipt) to the customer.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 5 and 13-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over McCall et al. in view of Hartsell, Jr. et al. (US Patent 5,956,259).

McCall et al. discloses the claimed device except for vehicle presence sensors. Hartsell, Jr. et al. discloses that it is known in the art to provide vehicle fueling station systems with transponder sensors for sensing and identifying a vehicle or user's presence without the driver having to enter the information. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the system of McCall et al. with the transponder system of Hartsell, Jr. et al., in order to allow the vehicle's presence and identification of the user to be sensed without the user having to enter identifying information.

Regarding the use of biometric sensors, biometric sensors are old and well known in the art of security to prevent fraud by identifying users and it would have been obvious at the time of the invention for one of ordinary skill in the art to utilize biometrics in the system of McCall et al. to prevent fraudulent use of the system.

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elaine Gort whose telephone number is (703)308-6391. The examiner can normally be reached on Monday through Thursday from 7:00 am to 5:30 pm.
